

BLD Services, LLC (BLD) is a General Contractor that purchased the Lateral Lining Division of Insituform Technologies, Inc. in January of 2009. Since this acquisition, BLD has grown to employ thirty rehabilitation crews making BLD the largest CIPP Lateral Lining Contractor in the World. These installation crews service the Eastern portion of the United States and have successfully installed more than 100,000 laterals in the last 9 plus years. The product/process has successfully been used in over 150,000 successful installations over the past 23 years.

Known today as the BLD “Service Connection Seal + Lateral” (SCS+L), this Cured-in-Place Pipe (CIPP) Lateral Lining System is a one-piece lateral lining process that creates a watertight tight seal at the mainline connection along with a structural repair to the lateral line. This process is performed from the mainline without the need for the installation of a cleanout.

BLD has over 900 years of collective CIPP industry experience in its Senior Management and Superintendents. BLD’s CIPP Lateral Lining Division is very well positioned to perform any work that you may have as we are a Licensed General Contractor in most of the United States. With the more than 30 installation and preparatory crews geographically located across the Eastern portion of the United States, our focus and goal is to safely and successfully respond to our client’s needs promptly.

If you have an interesting problem or application, we would like to discuss it with you. BLD’s use of both cutting edge and proven technologies, in lateral lining processes, and our vast array of experience, which includes more than 1000 years in our field personnel, uniquely positions BLD to offer our clients cost-effective and practical solutions to any infrastructure problems they may encounter with their service lateral infrastructure.

BLD has the training and knowledge of the construction standards with regards to OSHA, IDOT and is very familiar with the Environmental Protection Agency regulatory practices regarding Wastewater.

BLD Services, LLC has completed more than 500 separate projects for hundreds of customers. BLD will be happy to provide references, equipment lists, or additional information, that may be required to validate BLD’s ability to successfully perform work in your location.

Sincerely,
